ONE-PAGE QUICK GUIDE

LinkedIn CSV Merger

Capture multiple LinkedIn exports and combine them into one clean CSV.

Install the extension

+

Open your browser's Extensions / Add-ons developer page

Enable Developer mode, choose Load unpacked, select the linkedin-csv-merger folder, then pin the extension.

How to use

1

Start capture

Open the extension and click Start capturing before downloading any CSV files.

2

Download exports

Download your LinkedIn CSV export files. Keep the LinkedIn-only filter enabled for safer imports.

3

Check the counters

Reopen the popup to confirm the detected file and row totals. Each completed CSV is added automatically.

4

Merge and download

Click Stop capturing, then Merge & download. Your browser saves the combined cleaned.csv file.

5

Clear when finished

Click Clear data after checking the downloaded file. This resets the extension for your next merge.

If no files are detected

Make sure capture was started before the download finished. For a non-standard CSV, temporarily turn off the LinkedIn-only filter and download it again.

PRIVACY CSV processing stays inside your browser; files are not uploaded by the extension.
